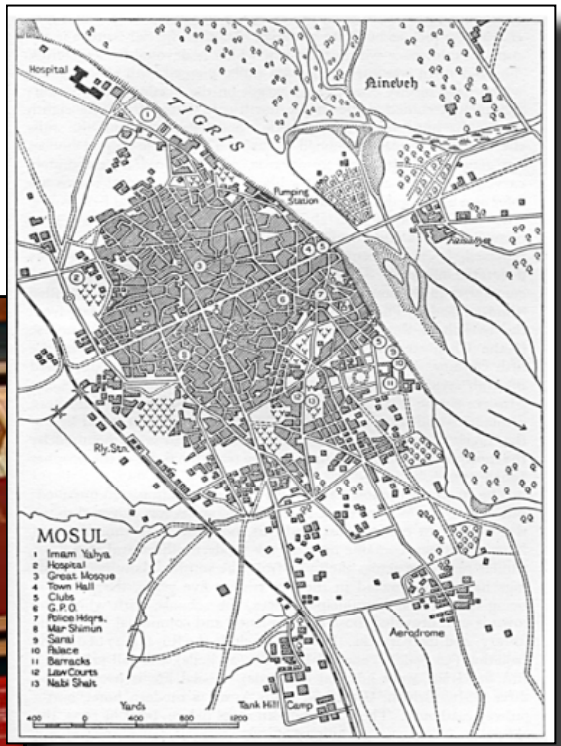
# Archival Research (Intelligence-Based)



A wealth of knowledge is held in archival repositories and records centers located around the world. In many instances, information regarding the landscape and culture of other nations is open-sourced and simply waiting to be discovered. The MCX-CMAC staff is trained to conduct archival research on virtually any topic of interest.

Archival research projects may include identification of repositories holding pertinent topical information, coordination with repositories for the transfer of documents in their holdings, travel to repositories to gather documents and data, analysis and arrangement of documents and data in a logical order (based upon the customer's retrieval requirements), and creation of a retrieval system enabling customers to efficiently access the information compiled during research. In addition to these basic tasks, MCX-CMAC can provide documents and data in electronic formats as well as in traditional paper formats such as photographs and maps.

*MCX-CMAC is located at the St. Louis District of the US Army Corps of Engineers.*
