Public Notice No.  
**P-2828**  
Public Notice Date  
**May 25, 2012**  
Expiration Date  
**June 14, 2012**

**Postmaster Please Post Conspicuously Until:**

File Number: 1984-35579

Interested parties are hereby notified that a permit renewal request has been received for Department of the Army authorization to conduct periodic channel maintenance activities in the Kaskaskia River, as described below.

**COMMENTS AND ADDITIONAL INFORMATION:** Comments on the described work should reference the U.S. Army Corps of Engineers public notice number shown above and must reach this office no later than the above expiration date to become part of the record and be considered in the decision. Comments should be mailed to the following address:

U.S. Army Corps of Engineers  
ATTN: CEMVS-CO-F (Charles Frerker)  
1222 Spruce Street  
St. Louis, Missouri 63103-2833

**APPLICANT:** U.S. Army Corps of Engineers, Carlyle Lake/Kaskaskia River Project Office, c/o: Mr. Robert Wilkins, 801 Lake Road, Carlyle, Illinois 62231 (618-594-2484) and the Illinois Department of Natural Resources, Kaskaskia River State Fish and Wildlife Area Office, c/o: Mic Middelton, 10981 Conservation Road, Baldwin, Illinois 62217 (618-785-2555).

**LOCATION:** Channel maintenance activities are proposed between Kaskaskia River miles 28.4 to 35.9, located between New Athens and Fayetteville, in St. Clair County, Illinois.

**PROJECT DESCRIPTION:** This permit renewal request is associated with activities to remove accumulated sediment within the Kaskaskia River on a periodic basis to maintain sufficient depths within the regulated navigation channel. The upper reach of the designated navigation channel starts at approximate river mile 35.9, near Fayetteville, Illinois. This area is known to be a heavier depositional site where channel maintenance dredging is frequently required. The deposition area extends downstream to approximate river mile 28.4, located near New Athens, Illinois. Channel maintenance activities would be conducted with a 12 to 14 inch suction dredge or clam shell excavator. If a suction dredge is utilized, the dredged material would be contained within attached dredge disposal pipe that would transport the material to existing dredge disposal basins located adjacent to the river channel. If a clam shell excavator is utilized, the material would be contained within the bucket and placed in hopper barges for shipment to the same existing dredge disposal basins or upland disposal areas. Dredging or excavation activities would be conducted to maintain a 9-foot-deep navigation channel within the described river reach. The dredging area is shown on the attachment.

**ADDITIONAL INFORMATION:** Additional information may be obtained by contacting Mr. Charles Frerker, U.S. Army Corps of Engineers Regulatory Project Manager, at electronic mail address: *charles.f.frerker@usace.army.mil*

**AUTHORITY:** The proposal will be processed under the provisions of Section 10 of the Rivers and Harbors Act.

**IDNR APPROVAL:** The Illinois Department of Natural Resources, Office of Water Resources shall evaluate the activity for state approval in accordance with the Rivers, Lakes and Streams Act of the State of Illinois (615 ILCS 5). Written comments concerning possible impacts to waters of Illinois should be addressed to Mike Diedrichsen, Illinois Department of Natural Resources, Office of Water Resources, One Natural Resources Way, Springfield, Illinois 62702-1271, with a copy provided to the Corps of Engineers.

**PUBLIC HEARING:** Any person may request, in writing, within the comment period specified in this notice, that a public hearing be held to consider this application. Request for public hearings shall state, with particularity, the reasons for holding the public hearing.

**ENDANGERED SPECIES ACT:** The proposed project is within range of the endangered Indiana bat (**Myotis sodalis**), least tern (**Sterna antillarum**), and the threatened decurrent false aster (**Boltonia decurrens**) and eastern prairie fringed orchid (**Platanthaera leucophaea**). A preliminary determination, in compliance with the Endangered Species Act as amended, has been made that the proposed permit renewal activities are not likely to affect species designated as threatened or endangered, or adversely affect critical habitat. In order to complete our evaluation, comments are solicited by this public notice from the U.S. Fish and Wildlife Service and other interested agencies and individuals.

**CULTURAL RESOURCES:** The St. Louis District will evaluate information provided by the State Historic Preservation Officer, Tribal Leaders and the public in response to this public notice. In addition, we may require a reconnaissance survey of the project area.

**EVALUATION:** The decision whether to authorize the activity will be based on an evaluation of the probable impact including cumulative impacts of the described activity on the public interest. That decision will reflect the national concern for both protection and utilization of important resources. The benefit which may reasonably be expected to accrue from the described activity must be balanced against its reasonably foreseeable detriments. All factors, which may be relevant to the described activity will be considered including the cumulative effects thereof; among those are conservation, economics, aesthetics, general environmental concerns, wetlands, historic properties, fish and wildlife values, flood hazards, flood plain values, land use, navigation, shoreline erosion, and accretion, recreation, water supply and conservation, water quality, energy needs, safety, food and fiber production, mineral needs, consideration of property ownership and, in general, the needs and welfare of the people.

The U.S. Army Corps of Engineers is soliciting comments from the public; Federal, state, and local agencies and officials; Indian Tribes; and other interested parties in order to consider and evaluate the impacts of these proposed activities. Any comments received will be considered by the U.S. Army Corps of Engineers to determine whether to issue, modify, condition or deny authorization for this proposal. To make this decision, comments are used to assess impacts on endangered species, historic properties, water quality, general environmental effects, and other public interest factors listed above. Comments are used in the preparation of Statement of Findings and/or an Environmental Impact Statement pursuant to the National Environmental Policy Act. Comments are also used to determine the need for a public hearing and to determine the overall public interest of the proposed activity.

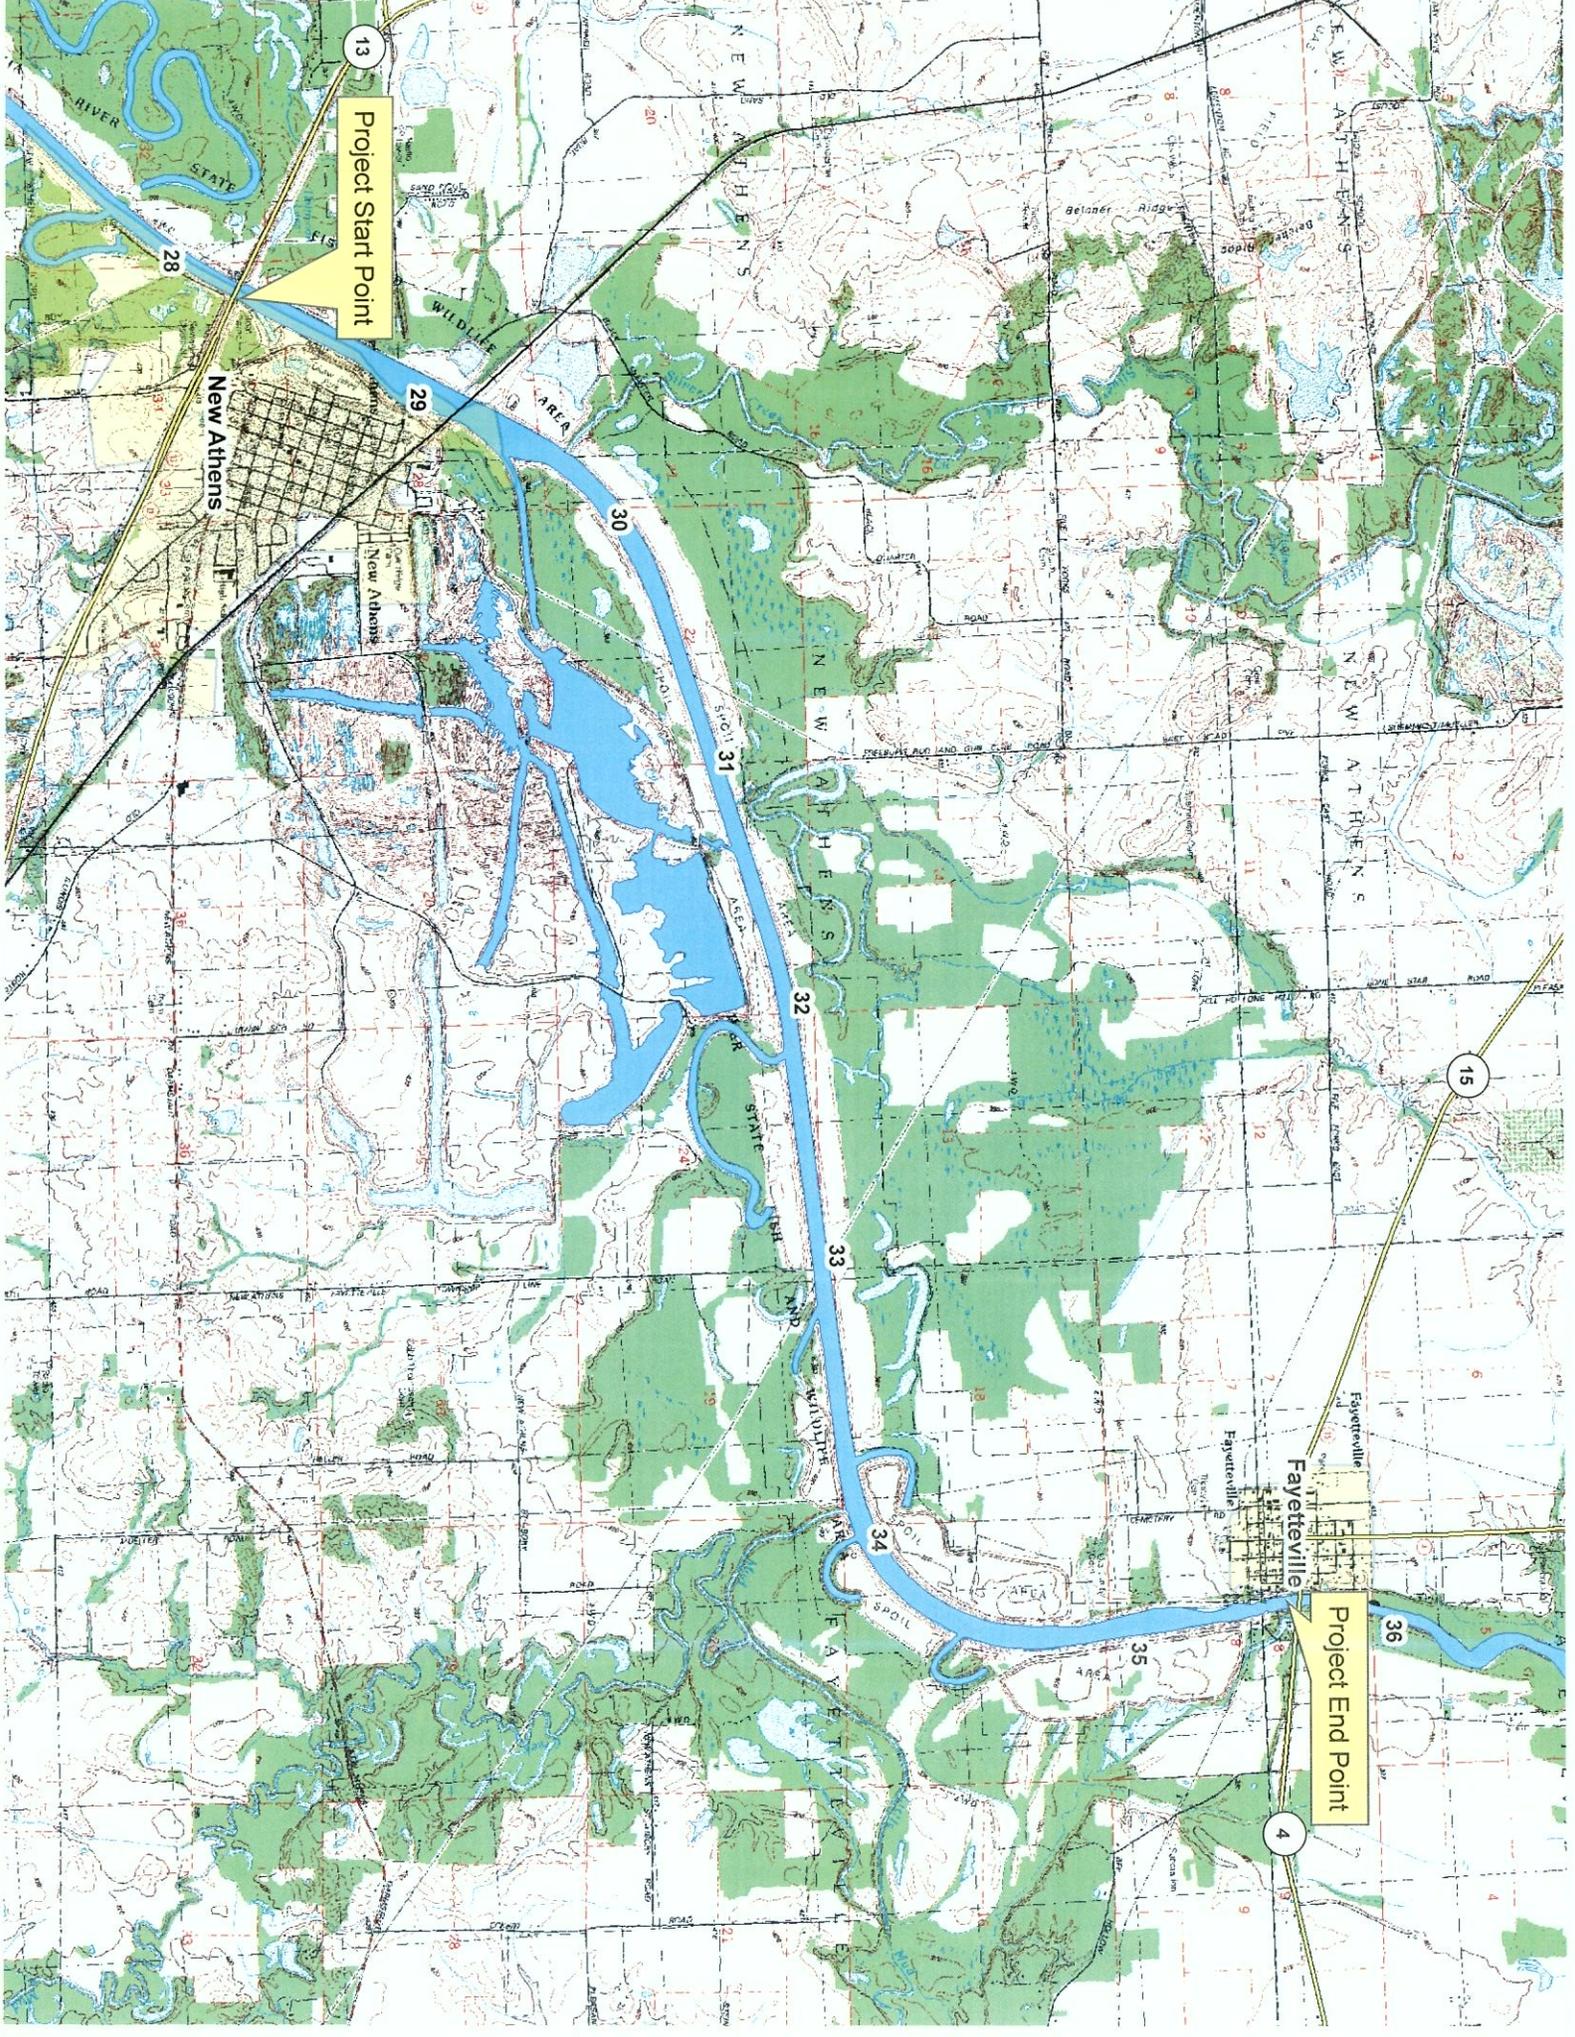

In accordance with 33 CFR 325.3, it is presumed that all interested parties and agencies will wish to respond to public notices; therefore, a lack of response will be interpreted as meaning that there is no objection to the proposed project.

*for* DANNY D. MCCLENDON  
Chief, Regulatory Branch
