

Contract is to provide time-sensitive disaster or emergency assistance construction activities related to flood control and water diversion projects, including but not limited to stream bank and shoreline stabilization/protection, ecosystem/habitat restoration and flood damage reduction projects.

Task Orders will include multi-disciplinary activities, but not limited to construction, reconstruction, renovation, restoration, incidental or limited design associated with those types of projects, and other presently unforeseeable requirements that may arise, and will include a variety of trades that are required for stream bank and shoreline protection, ecosystem/habitat restoration, flood protection, aquatic ecosystem restoration, and various operations and repair projects.

This work includes earthwork operations for the construction of earthen levees, borrow site operations, and all necessary fill placements for compromised landside, riverside, or crown repair on the levee.

Areas of work are to be aligned in accordance with attached map showing counties in Illinois and Missouri.
