

Knowledge Management Services

Knowledge management is the systematic process that identifies, evaluates, and retrieves an organization's information and knowledge assets to foster sharing and strategic use for internal and external needs. MCX-CMAC has expanded its proven record of providing customer-specific solutions for unique problems arising from documents in traditional and electronic formats to include knowledge management practices. In addition to developing a scalable Knowledge Repository for the existing and soon-to-be created information and knowledge assets of an organization, the MCX-CMAC can also assist with the development of practices to facilitate knowledge sharing and creation outside of the physical assets.

The MCX-CMAC typically performs a Knowledge Audit that outlines the knowledge assets and resources available to its customers and provides evaluations and suggested recommendations to be followed once the knowledge management project begins. The Knowledge Audit focuses on costs savings by identifying existing resources that can be exploited and practical solutions.
