Dear Sir:

Reference: Letter, J. R. Roeder, ERDA/ALO, to D. R. Hensley,
 Area Manager, Burlington ERDA Plant, dated 24 February 1975

Subject: Radiological Condition Surveys of Real Property at
 Burlington, Iowa

In reply to your inquiry on the above subject the following information is submitted.

All buildings that were involved in the radioactive material operations have been surveyed with no detectable levels above background obtained.

The only real property with contamination above background levels is the FS-12 area. FS-12 was used as a firing site for D-38 and explosives. The FS-12 area was decontaminated (See Att. #1 - 3 pages) with the waste material being shipped to Nuclear Engineering at Sheffield, Ill.

Very truly yours,

MASON & HANGER-SILAS MASON CO., INC.

R. L. Holmberg
 Plant Manager
