St. Charles, Missouri 63301

Dear Ms. Bielsmith:

COMPLETION OF REMEDIATION ACTIVITIES AT VICINITY PROPERTY #22 AT 9015 FROST AVENUE

The Department of Energy (DOE) has completed the cleanup of the radiologically contaminated portions of the property located at 9015 Frost Avenue in Berkeley, Missouri. Approximately 650 cubic yards of soil contaminated with thorium-230 was excavated from the property and shipped to a licensed disposal facility.

An independent verification contractor survey was conducted by the Oak Ridge Institute of Science and Energy and Education (ORISE), subsequent to the cleanup conducted on the property. Protocol of the Formerly Utilized Sites Remedial Action Program (FUSRAP), mandates an independent survey to ensure that the post remedial action status of the site meets the guidelines set forth in the DOE Order 5400.5. These approved guidelines have been determined to be protective of human health and the environment.

All post remedial action soil samples collected for verification were below the site specific residual radioactivity criteria. Based on the results of the IVC survey, all areas assessed within the property meet the guidelines established in DOE Order 5400.5 and the property is released without radiological restrictions.

We greatly appreciate the cooperation during our cleanup activities. If you need additional guidance or have concerns or questions regarding the cleanup of your property, please contact me at (423) 576-9634 or Bob Atkin at (423) 576-1826.

Sincerely,

David G. Adler, Site Manager
