**ST. LOUIS AIRPORT SITE - ESTABLISHING BACKGROUND CONCENTRATIONS FOR THE
ST. LOUIS AIRPORT SITE (SLAPS)**

Dear Ms. Garstang:

Establishing representative background concentrations for all potential contaminants that are also naturally occurring in the surficial material at the St. Louis Airport Site (SLAPS) is essential. The three background sampling sites recommended by MDNR will be reviewed for suitability (representative of the natural surficial materials at SLAPS) and accessibility. Any sampling site located on private property will require a real estate instrument (REI) before access can be obtained. When specific locations on the ground are identified and samples collected, the presence of a DNR geologist would be appreciated. We anticipate that this activity can be coordinated with the overall SLAPS characterization effort.

We welcome your input and will be contacting you as we make plans to perform these activities. If you have any questions, please contact me at (314) 524-4083 or Mr. Wayne Johnson at (423) 576-5165.

Sincerely,

Steve H. McCracken
St. Louis Site Manager
