December 15, 1994

David Adler, Site Manager

Dear Sir:

During 1988 there were samples of soil taken in fifty foot grids along east side of Hazelwood Ave. in Hazelwood, Mo. As a result of these samples there were more samples taken at closer intervals.

I was then contacted by, as I recall, S. D. Liedle, Project Manager-FUSRAP. I met with him at the 9200 Latty Ave. site and he showed me the readings of excessive contamination on my property and between my property and Hazelwood Ave. As I recall there were about six or seven readings of excessive contamination on my property plus several between my property and Hazelwood Ave. This was supposedly why Figure 5-94 of Vicinity Property 43 was drawn. Also at that time he requested that I notify them if I removed any soil within that area.

During the week of October 17, 1994, Joe Williams told me there was no contamination on my property. It seems to me that he disregarded the second set of samples.

How could there be excessive contamination on my property in 1988 and no contamination on my property six years later when the radioactivity supposedly has a half-life of seventy-seven thousand years?

If there was no contamination on my property then why was I kept in constant turmoil during the past six years about the contamination on my property? This greatly upsets me. also this is the second request for answers to these questions.

Sincerely,
