U.S. DEPARTMENT OF ENERGY INFORMATION CENTER WELCOMES VISITORS

Many of you are aware of the radioactively contaminated soil that is located in St. Louis, and would like to know more about where it came from, how it affects you, and what is going to be done about it. That is why the Department of Energy (DOE) opened an Information Center at 9200 Latty Avenue, where some of the soil is stored.

The DOE recognizes the importance of getting St. Louisans involved in the decision-making process and has taken steps to work with the public towards a safe, effective solution.

Recently David Adler, DOE Site Manager, met with Mayor Miller, Berkeley City Council members, and other Berkeley officials, to discuss the cleanup and storage options that are being considered, and to answer their questions. Other DOE representatives attended a meeting of the Berkeley Betterment Commission, where the same information was presented.

In an effort to inform as many people as possible about the St. Louis Site, a Speakers' Bureau has been established. Speakers are available to address schools, groups, clubs and organizations. Meetings may be held in the Conference Room of the Information Center, or at your location.

If you would like to know more about the site, schedule a speaker, or would like to voice your comments about the cleanup and disposal of the contaminated soil, you may call the Information Center at 524-4083. Your comments may also be placed in writing to: David Adler; U.S. Department of Energy Information Center; 9200 Latty Avenue; Hazelwood, MO 63042.

David Adler, DOE site manager discusses possible radioactive waste cleanup measures with members of the Berkeley City Council
