|                 |                              |                 |                                    |                    |                                  | Uranium-235      | -0.13                                    | 0.33  | 0.53                    |                                  |
|                 |                              |                 |                                    |                    |                                  | Uranium-238      | 1.97                                     | 1.19  | 1.43                    |                                  |

**Table C-1**  
**PSC Metals Vicinity Property (DT-8)**  
**Pre-Design Investigation Radiological Data Results**

Page 203 of 203

| Sample Location | Sample Identification Number | Collection Date | Start Depth (ft 'bgs) <sup>2</sup> | End Depth (ft bgs) | Thickness of Cover Material (ft) | Parameter | Result <sup>3</sup> (pCi/g) <sup>4</sup> | Error | Detection Limit (pCi/g) | Sum of <sup>5</sup> Ratios Value |
|-----------------|------------------------------|-----------------|------------------------------------|--------------------|----------------------------------|-----------|------------------------------------------|-------|-------------------------|----------------------------------|
|-----------------|------------------------------|-----------------|------------------------------------|--------------------|----------------------------------|-----------|------------------------------------------|-------|-------------------------|----------------------------------|

<sup>1</sup> ft - feet

<sup>2</sup> bgs - below ground surface

<sup>3</sup> Analytical data includes background values (i.e., concentrations reflect gross radionuclide values)

<sup>4</sup> pCi/g - Picocuries per gram

<sup>5</sup> Prior to calculating the SOR, background values for each radionuclide were subtracted from their respective gross radionuclide values

Background Values:

|               |            |
|---------------|------------|
| Radium-226 =  | 2.78 pCi/g |
| Radium-228 =  | .95 pCi/g  |
| Thorium-230 = | 1.94 pCi/g |
| Thorium-232 = | 1.09 pCi/g |
| Uranium-238 = | 1.44 pCi/g |

If Detection Limit exceeds Result, ½ of Detection Limit was substituted for Result value in the SOR calculation.

*Samples in italics indicate MDA > Result*

January 8, 2001

## Case Narrative

LOT NUMBER: F0L070285

This report contains the analytical results for the sample received under chain of custody by STL St. Louis on December 7, 2000. This sample is associated with your St. Louis FUSRAP project.

All applicable quality control procedures met method-specified acceptance criteria except as noted on the following page.

This report is incomplete without the case narrative.

### Observations/Nonconformances

#### Affected Samples:

1: SLD06650

#### Affected Methods:

7.3.3

#### Case Narrative:

Reactive CN LCS had 0% recovery. Confirmed with prep analyst that LCS was positively spiked.

#### Affected Samples:

1: SLD06650

#### Affected Methods:

7470A

#### Case Narrative:

The SOP requires a ICB to be analyzed immediately after the ICV. The correct sequence is ICV,ICB,CRA. Instead the analyst ran ICV, CRA, a non reported QC, ICB. Since this is a deviation from the SOP a nonconformance was initiated

#### Affected Samples:

1: SLD06650

#### Affected Methods:

7470A

#### Case Narrative:

The TCLP procedure requires the samples to be spiked before preservation. Since the initial MS/MSD spikes before preservation were prepped at the wrong level the samples were spiked at the correct level after preservation.

**Affected Samples:**

1: SLD06650

**Affected Methods:**

8081A

**Case Narrative:**

Batch QC for TCLP pesticides consisted of LCS and LCS duplicate.

**Affected Samples:**

1: SLD06650

**Affected Methods:**

8270C

**Case Narrative:**

For organic extraction batch (0349201), the water method blank (DRDX11AA) for TCLP analysis has confirmed low recovery for the surrogates (2-Fluorophenol and Nitrobenzene-d5). It is noted that the extraction-fluid blank (DRDX11AE) had all of its surrogates and internal standards in-control.

**Affected Samples:**

1: SLD06650

**Affected Methods:**

6010B

**Case Narrative:**

The serial dilution for copper and zinc was outside of stated control limits and flagged appropriately.

**Affected Samples:**

1: SLD06650

**Affected Methods:**

8082

**Case Narrative:**

TCMX and DCB were biased high on the primary column CCALs, however, the average %D was less than 15%, which is acceptable per method.

TCMX and DCB were biased high on the confirmation column CCALs, however, this column was not used for quantitation.

**Affected Samples:**

1: SLD06650

**Affected Methods:**

8082

**Case Narrative:**

The sample required a 10 X dilution to bring the analyte response within the calibration range. Subsequently, the surrogate spikes were diluted out and recoveries could not be evaluated.

**Affected Samples:**

1: SLD06650

**Affected Methods:**

8270C

**Case Narrative:**

The surrogate in the blank was not within the QC limits. Since there was a TCLP blank associated with the batch, all other QC criteria was met, the data is reported.

# METHODS SUMMARY

F0L070285

| <u>PARAMETER</u>                                   | <u>ANALYTICAL<br/>METHOD</u> | <u>PREPARATION<br/>METHOD</u> |
|----------------------------------------------------|------------------------------|-------------------------------|
| pH Non-Aqueous                                     | SW846 9045A                  |                               |

## SAMPLE SUMMARY

F0L070285

| WO #  | SAMPLE# | CLIENT SAMPLE ID | DATE     | TIME  |
|-------|---------|------------------|----------|-------|
| DQ2JX | 001     | SLD06650         | 12/06/00 | 12:44 |

### NOTE(S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

PARCC Parameter Analyses

**PSC Metals**  
**Summary of Data Quality Assessment**

August 2005

1. **Precision.** Did field and laboratory duplicate samples analyzed in the laboratory meet SAG Table 3-1 DQOs for precision?

The data have been evaluated and/or validated by the SAIC Data Management Group. Generally, the Relative Percent Difference (RPD) and/or Normalized Absolute Difference (NAD) were within the control limits for the field duplicate samples. Tables 1 and 2 demonstrate the exceptions. Laboratory duplicates are analyzed at the time of data package review. The sample data was within the control limits for 100.0 % of the data. The data can be used for their intended purpose.

2. **Accuracy.** Did laboratory control samples and/or tracer samples analyzed in the laboratory meet SAG Table 3-1 DQOs for accuracy?

The data have been evaluated and/or validated by the SAIC Data Management Group. Generally, the Relative Percent Difference (RPD) and/or Normalized Absolute Difference (NAD) were within the control limits for the field duplicate samples. Tables 3 and 4 demonstrate the exceptions. The laboratory control sample and/or the tracer was within the control limits for 100.0 % of the data. The data can be used for their intended purpose.

3. **Representativeness.** Were the analytical procedures specified in the SAG and work description followed? Were holding times exceeded?

The data have been evaluated and/or validated by the SAIC Data Management Group. The proper analytical methods were utilized in the analyses of these samples. Holding times were met for 100.0% of the analyses. The data can be used for their intended purpose.

4. **Completeness.** Are results usable for at least 90% of laboratory samples?

The percent completeness for this sampling effort is 99.9 %.

5. **Comparability.** Are data sets sufficiently comparable to allow reasonable conclusions to be drawn?

Standardized and consistent procedures used to obtain analytical data are expected to provide comparable results. Current and historical information are sufficiently comparable to allow a reasonable determination of the nature and extent of the radiological contamination.

| SLD72967/SLD72967-1 | N/A         | 0.29 | 33.9%       | N/A | NC          | NC  |
| SLD72987/SLD72987-1 | NC          | NC   | NC          | NC  | NC          | NC  |
| SLD73007/SLD73007-1 | 23.8%       | N/A  | 8.1%        | N/A | NC          | NC  |
| SLD87327/SLD87327-1 | N/A         | 0.74 | 17.1%       | N/A | NC          | NC  |

N/A – Not Applicable.

NC – Not Calculable when one or both samples non-detect.

Shaded and Boldface – RPD / NAD pair exceeds the control limit.

N/A – Not Applicable.

NC – Not Calculable when one or both samples non-detect.

Shaded and Boldface – RPD / NAD pair exceeds the control limit.

**Table 4: Split Precision for Gamma Spec. Analyses for PSC Metals**

| SampleName          | Actinium-227 |     | Americium-241 |     | Cesium-137 |      | Potassium-40 |      | Protactinium-231 |     | Radium-226   |     | Radium-228 |     | Uranium-235 |      | Uranium-238 |     |
|---------------------|--------------|-----|---------------|-----|------------|------|--------------|------|------------------|-----|--------------|-----|------------|-----|-------------|------|-------------|-----|
